Automatic Hydraulic Briquette Press

Examples of wood waste and biomass material that has been briquetted into a solid fuel source that can be used with our boilers and furnaces.

Sanding Dust

Cotton Gin Waste

Wood Chips

Pictured above is the BP-100—Larger mechanical models are available

Model	BP-100
Tank Capacity	40" (1016mm) Diameter x 36" (914mm) Height
Maximum Volume of Material	28 Cubic Feet—7928 Cubic Meters
Briquette Size	2" (50.8mm) Diameter—1/2"-5" (12.7mm-127mm) Length
Hydraulic Pump Motor	7.5 HP
Maximum Working Pressure	15 MPa
Machine Size	66" (1676mm) L x 44" (1117mm) W x 59" (1499mm) H
Net Weight	1500 lbs—680kg
Output Volume	Up to 140 lbs. (Up to 63 kg) / Hour

Biomass Briquette Systems machinery is sold and serviced in the USA by our mfg representatives/distributors and service network. System design is also available-Call for information.

Biomass Briquette Systems briquette press converts wood chips and various types of biomass material into a useable fuel source.

Advantages of briquetting your waste material:

1. Converts waste into a valuable heating source for colder climates.—Reducing or eliminating high monthly heating bills.
2. Cost savings management of wood waste material by reducing the volume of waste to be handled—Thus reducing labor time and tipping fees for removal and disposal.
3. Briquettes can be used as an additional profit source, selling them as a solid fuel source—Increasing company profitability and providing a quick ROI for the initial investment.
4. Compared to other methods of reducing waste volume, briquetting offers an affordable alternative.
5. Effectively helps with compliance of local regulations mandating reduction of solid waste.
